We are getting a "Read Only" error when we try to write to our NFS disk.

e.g: mkdir: cannot create directory '/mnt/export/files/test': Read-only file system

The drive is mounted using the (default) rw option. So we think its an issue in the host export config.

Hi guys, yes, I can confirm this issue. It started maybe 30 mins ago. We are investigating this now, please be patient. My apologies.

Hey guys, can you please check again. I'm not sure if your nfs mount is configured to reconnect, but I believe read-only problem should be solved now. Please let us know if you have any further problems.
